

Rosana Casanellas

Biscayne Nature Center

I love being in Biscayne Nature Center because we could learn how important is to preserve our environment. We learn the natural diversity that we have in our beaches. Since we do not take care of our environment, our species are vanishing and our ecosystem is deteriorating. One important cause that is deteriorating our planet is the pollution of the air. If we learn how we are destroying our planet, maybe we can find a way to preserve it .We are the one responsible for preserving our planet.
